A list of the most popular frozen food brand products is available in the FCE Card & Bin Guide at www.fastcorp vending.com. Use the following template to determine which bins to use for products not listed in the FCE Card & Bin Guide.

This guide covers Z-400 Food Court Express Bins as well as bins for other Fastcorp Frozen Ice Cream Vendors (Z-400, F820, F631). A template is provided for each bin, showing the inner dimensions of each. Place product inside each template to check for fit. Note that items can be loaded on their back, side or end depending on product dimensions and capacity required. In some cases, product may be loaded on an angle inside the bin if product will remain rigid without bending or folding. Make sure that product seams do not face up, since it will prevent the robot from achieving suction seal required to properly vend the product. Also note that packaging seams and flaps may extend beyond the bin template perimeter. In most cases, flaps will mold and fold into the bin and not affect product retrieval as long as the product or non-flexible portion of the product package fits properly inside the bin.

PRODUCT LOADED ON BACK
