

Pairing a device to a replacement/alternate BLU-Dex for Streamware Simplifi Mobile App

This will need to be done each time you are using a different BLU-Dex then the time before. If you are sharing BLU-Dex units you might want to do this every morning to avoid any issues with your data files.

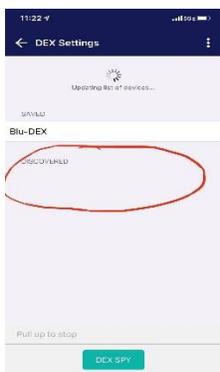

NOTE: When pairing and using the BLU-Dex device make sure you turn off the bluetooth on your cell phone or other devices other than device you are using to connect the BLU-Dex to. If you do not turn off other devices when you go to dex your machine you may get error of Dex Fail in mid transmission due to other devices trying to connect to BLU Dex device.

Log into your Simplifi Account and click on the Settings options

Then Click on DEX Settings

THIS IS THE IMPORTANT PART. The new/replacement BLU-Dex will show up in the Discovered area. Click on that one, **NOT** the one in the Saved area even though the names are the same. You can then click on DEX Spy to try it out. As long as the unit you just synced to is being used you will not need to do this process again, only when you change it out!
